**Notice of winning the "First JAPAN Construction International Award" by
KIDOH CONSTRUCTION CO., LTD.**

Dear Sirs/Madams,

We are pleased to inform you that our subsidiary, KIDOH CONSTRUCTION Co., Ltd. (hereinafter referred to as "KIDOH CONSTRUCTION") received the "First JAPAN Construction International Award" awarded by the Minister of Land, Infrastructure, Transport and Tourism as of March 27 as follows:

This award was established by the Ministry of Land, Infrastructure, Transport and Tourism to commend representative "high-quality infrastructure" overseas construction projects and small- and medium-sized construction companies that actively assume leadership roles overseas, with the purpose of strengthening Japan's competitiveness and helping Japan further expand business overseas.

This first "JAPAN Construction International Award" was awarded by the Minister of Land, Infrastructure, Transport and Tourism to 10 overseas construction projects and 7 small- and medium-sized construction companies.

KIDOH CONSTRUCTION received this award as a company that has contributed to enhancement of the international presence of Japanese companies and promoted overseas business expansion, being selected from among medium- and small-sized construction companies that conduct overseas business activities including construction, design, surveying and supply of construction materials.

The reasons for winning the award include (1) implementation of projects in Indonesia and Myanmar through dissemination and awareness-raising activities for pipe jacking (microtunnelling) technology, (2) preparation of technical/cost estimation standards at local sites, and inviting local engineers to Japan for training, thus making a significant contribution to technology transfer, etc.

For details, please visit the website of KIDOH CONSTRUCTION <http://www.kidoh.co.jp/>, and <http://www2.mlit.go.jp/common/001227506.pdf>.

KIDOH CONSTRUCTION will continue to actively promote domestic and overseas infrastructure projects, including underground pipe jacking and replacement projects, as well as solar power generation related construction projects, etc., which we are engaged in.
